

CIEL®

HR inspired by science

CASE STUDY

*A Leading Engineering, EPC & Infrastructure
Enterprise*

BACKGROUND

A leading engineering and infrastructure organization was undertaking enterprise application modernization to support large-scale infrastructure operations. As part of this transformation, the organization required skilled Microsoft technology professionals to strengthen its application development and support capabilities while ensuring timely project execution.

CHALLENGE

The client required an integrated staffing partner capable of recruiting experienced Microsoft technology professionals within stringent project timelines. The challenge was to source specialized talent efficiently while maintaining the quality of hires and ensuring seamless execution of business-critical modernization initiatives.

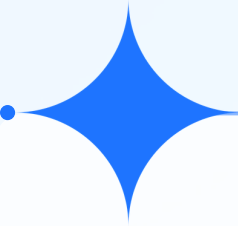

SOLUTION

CIEL HR delivered a managed services model tailored to the client's technology hiring requirements. The engagement combined recruitment, technical screening, project coordination, and continuous stakeholder engagement to streamline the hiring process and ensure seamless execution. This approach enabled timely onboarding of qualified technology professionals while supporting the client's evolving project requirements.

Business Benefits:

- *Successfully deployed 35+ technology professionals across Microsoft technology projects.*
- *Accelerated hiring for specialized Microsoft technology roles.*
- *Simplified the hiring process through an integrated managed services approach.*
- *Enabled timely execution of enterprise application modernization initiatives.*
- *Supported business continuity by delivering skilled technology professionals aligned with project requirements.*
